2011 Community Readiness Survey Results — City of Bloomington

Community Readiness Survey is...

A survey developed and validated by the Minnesota Institute of Public Health (MIPH) that...

Assesses resident attitudes and norms regarding alcohol, tobacco, and other drug use problems in order to...

Raise awareness, strengthen prevention strategies and help spotlight areas of greatest need.

Readiness What does "Readiness" mean? Readiness is the willingness for residents to unite efforts and address alcohol, tobacco, other drug and gambling issues in their community in order to shift norms.

Who took the survey?

MIPH mailed the survey to a random sample of 600 Bloomington residents and received an acceptable response rate (20%).

To help improve response rate, mailed survey packets were sent with a cover letter on City letterhead signed by the City Mayor.

Over one-half (54%) of the respondents were between the ages of 25-54 . 19% of the respondents were 65 years and older.

The majority of the sample was female (67%) and White (82%). Two-thirds (62%) had a college or graduate/ professional degree.

How do we use the results?

Assessment is a crucial piece of program development. There are three pieces to alcohol, tobacco, and other drug use* assessment:

Collect data on alcohol, tobacco, and other drug use

Assess resources and community leader views

Assess resident attitudes and community norms towards these substances and efforts to prevent or deter their use

This survey addresses the third piece and helps take the "prevention temperature" of a community's readiness to address alcohol, tobacco, and other drug related issues.

This survey included questions on gambling. However, BPH does not have programs dedicated to gambling prevention and therefore these results are not presented here 2/2012 Bloomington Public Health Report, adapted from MIPH "Community Readiness Survey: One Size Does Not Fit All – Results from Bloomington, MN"

2011 Community Readiness Survey Results – City of Bloomington

Measurement	Level of Readiness (willingness to change)	Suggested Next Steps
Perceptions of the severity of alcohol, tobacco, and other drug problems in the community	Low – Alcohol, tobacco & other drugs	Increase public awareness of use/abuse rates and problems associated with use/abuse of substances.
		Compared to 2007 survey results, perceptions of the severity of ATOD has remained at the low level of readiness.
Perceptions of permissive attitudes regarding alcohol, tobacco, and other drug use among youth	High – Alcohol, tobacco & other drugs	Capitalize on existing alcohol, tobacco and other drug norms. Target permissiveness of special occasion drinking in the home and associated norms .
		Compared to 2007 results, perceptions of permissive attitudes of ATOD has remained at the high level of readiness.
Support for policy and prevention ef- forts regarding alcohol, tobacco and other drug use	Medium – All	Determine how existing prevention efforts can be enhanced. Enhance existing programs. Determine key leaders to take on additional roles related to ATOD prevention
		Compared to 2007 results, support for ATOD prevention de- creased from high level to a medium level of readiness.
Perception of ease of access to alco- hol, tobacco and other drugs among adolescents	Low – All	Increase public awareness of common "access sources" from MN student survey data. Target social access in the homes. Pro- mote newly adopted Social Host Ordinance.
		Compared to 2007 survey results, perceptions of the ease of access to ATOD has remained at the low level of readiness.
Perception of community commitment to respond to issues facing community	High – All	Maintain community commitment and build on established pro- grams and initiatives.
		Compared to 2007 results, perceptions of community commit- ment of ATOD has remained at the high level of readiness.
