July 2016

It has been another very busy year at Public Health. Our biggest accomplishment started in 2014 and culminated this year by becoming a *Nationally Accredited Public Health Department*. We are one of only seven other agencies accredited in the State of Minnesota, and only one of 151 agencies across the nation. This puts us in good company and shows the strength of our agency and the work we do for the residents of Bloomington, Edina and Richfield.

The theme of this year’s annual report is “Where You Live Matters.” Over the past decade there has been realization that our health is a reflection of the environments where we live, work and play. We know that our genetic makeup only accounts for 10 percent of our health and clinical care helps another 10 percent. But the vast majority of our health – 70 percent – can be attributed to our social and economic status and our health behaviors.

A healthy life expectancy is how many healthy years you can expect to live after you reach 65. We have data that shows there can be up to a 13 year difference in life expectancy based on where people live – sometimes less than three miles apart. This further supports the knowledge of where you live matters to you and a healthy life.

Public Health is working on making your environment a place where *everyone* can be healthy. While we work with individuals, we also work on changes to the policies, planning and practices at the City level. This approach, a health in all policies approach, will help you in making the healthy choice the easy choice.

Again, I want to thank the staff at Bloomington Public Health. They are the shining stars of the work we do. Our agency is where we are because we have a caring, compassionate and engaged staff, and your ability to be healthy is greater because they are working on your behalf.

Who We Are/Mission Back Cover
Public Health is here to be part of the process that assures where you live supports your health.

Surroundings must support healthy behavior

Your choice to practice healthy behaviors will only be successful if your surroundings support your choice. To eat healthy you must be able to get fresh produce. To get regular exercise you must be near safe green spaces where you can walk, bicycle or play. To breathe fresh air you need to have a home that is free of mold, cigarette smoke and other airborne health hazards. You must also have care for your health when you need it.

Decisions determine surroundings

Having support for good health in your surroundings is a result of decisions that people have made or will make. These can be decisions like where to place roads, parks, farmers markets and supermarkets. The decisions can also be about how much money to use for things like public transportation, housing, education and assistance programs. There are also decisions about laws to protect our health, like alcohol and tobacco laws that protect youth.

Striving for a healthy community guides our decisions

Without meaning to, well-intended decisions from the past have made good health harder for groups of people in the present. An example could be freeways that become a barrier for some people to grocery stores and playgrounds. When groups of people suffer poor health because of conditions where they live, we call it health inequity. The good news is that we can change these conditions when we partner with community schools, organizations, businesses and city government.
In the process we strive to **promote**, **protect** and **improve** the health of our community.

**To promote**

We work with community partners to **create the settings** in your surroundings and in your homes that support lifelong health by reducing risks for cancer, heart disease, and diabetes. For young families and seniors, we provide assistance that is important to special health needs.

**To protect**

We seek to **assure a high level of protection** from health threats, including communicable diseases, natural and intentional disasters and preventable injuries. Protection also comes from assuring you have a way to get health care when needed.

**To improve**

We use proven practices to **raise** the level of health in our community over time.
And we seek solutions to our health challenges.

A community with greater income inequality has greater health challenges

Income equality assures better health for everyone. Hennepin County is one of the counties in Minnesota with greatest income inequality.* Income inequality is the difference in income between people with the most and least income.

Income inequality affects health in many different ways. For example, in a community it can increase the risk of dying early, having poor health, and being diagnosed with heart disease. Income inequalities in a community can make differences in social class and status more visible. However, if we can make these differences less visible, we may be able to reduce the tension and feelings of mistrust that income inequality produces. If we do this, it may be possible for all residents to feel a sense of community and support that promotes wellbeing.

Communities can work together to narrow the gap between people with the most and least income. One of the ways we can do this by investing in policies, programs, and plans that give everyone the opportunity to be healthy.

*Income Inequality is the ratio of household income at the 80th percentile to that at the 20th percentile. A higher inequality ratio indicates greater division between the top and bottom ends of the income spectrum.

What are poverty guidelines used for?

The Department of Health and Human Services poverty guidelines, including percentages such as 185%, are used to determine eligibility for a number of federal programs. Examples include Head Start, Children’s Health Insurance Program, Supplemental Nutrition Assistance Program, National School Lunch Program and Special Supplemental Nutrition Program for Women, Infants and Children.
**A CHALLENGE**

Provide a setting in multi-unit rental housing for health equity

Non-smokers in multi-unit housing can still be exposed to the health hazards of secondhand smoke. This creates health inequity in our community because more Blacks and Hispanics or Latinos live in rental housing. Children living there may have more ear infections, respiratory infections and asthma problems. Adults have a greater risk for heart disease, lung cancer and stroke.

**A SOLUTION**

Help more rental properties to become smoke free

Bloomington Public Health and the Association for Non-Smokers MN (ANSR) are working together with SHIP (Statewide Health Improvement Program) support to help more multi-unit property owners adopt smoke-free policies.

**COMMUNITY SNAPSHOT**

More Black and Latino community members live in rental housing than White community members.

<table>

Bloomington, Edina and Richfield Averaged Percentage

Less than half of rental properties are smoke-free.

- Bloomington – 31% smoke-free
- Edina – 47% smoke-free
- Richfield – 33% smoke-free
OUTCOMES IN “PROMOTE”

- **770 Latino and Somali children** are getting **Early Childhood Education** to support an early start at healthy behavior and success in school.*
- **Richfield and Bloomington youth** have greater protection from accessing tobacco products with new ordinances that strengthen tobacco policies.*
- **117 multi-unit properties** in Bloomington, Edina and Richfield are smoke-free.*
- **14,500 students** in Bloomington and Richfield schools have support to promote and protect health, well-being and ability to learn from updated school district wellness policies for healthy eating and physical activity.*
- **All visitors to City of Bloomington facilities** with concessions have healthier food options due to a City Nutrition Policy. A Tobacco Policy protects all visitors to City facilities and grounds from tobacco fumes.*

*Made possible through support from the Statewide Health Improvement Program, Minnesota Department of Health
“I was very sad because a lot of my friends are dying and I didn’t realize how much it affected me.”
We are here to act on their behalf—to locate assistance and resources that will help them get their lives back.

One of our nurses found an elderly lady, Dorothy, living alone in her home with two feet of garbage in the kitchen. There was clutter, garbage and pet feces and urine throughout the house. There was no working plumbing in the bathrooms, and water had not been used in the last three months.

We want our elderly community members to be well-cared for and live with dignity. However, when they become isolated and out of touch with the rest of the world like Dorothy, it is easy for life to get out of hand. Day-to-day living can become unmanageable. Physical and mental health can deteriorate. We are here to act on their behalf—to locate assistance and resources that will help them get their lives back. That is what happened for Dorothy after that first visit our nurse made along with the Richfield Code Enforcement Officer and City Code Inspector.

Dorothy had very swollen legs and could barely walk. She appeared confused when our nurse asked some basic questions. An ambulance took Dorothy to the hospital after the Emergency Services Technician arrived and determined she needed medical attention. When Dorothy’s condition was stable, she transferred to a transitional care facility. Our nurse visited Dorothy at the care facility along with the facility’s social worker. Our nurse provided Dorothy with resources to get her home cleaned and repaired.

When our nurse visited with Dorothy at the care facility, Dorothy told our nurse she started taking medication for depression and heart problems. Our nurse noted how Dorothy appeared very clear in her thinking at that time. Dorothy said, “I was very sad because a lot of my friends are dying and I didn’t realize how much it affected me.”

Dorothy hired a professional cleaning service, had her plumbing restored and after several weeks returned to her home. Dorothy won’t be alone and isolated any longer. Our nurse will continue to make visits and offer support and resources. Best of all, Dorothy got her life back.

To protect this woman’s identity, we did not use her real name and image for this story.
**A SOLUTION**

Help mothers breastfeed to protect their babies’ health.

The cells, hormones, and antibodies in breastmilk protect babies from illness and disease, including asthma, type 2 diabetes, sudden infant death syndrome and others. Our breastfeeding peer counselor program has received statewide recognition for achieving breastfeeding initiation rates that surpass national goals. Because the program decreases differences in breastfeeding rates between racial and ethnic groups, it promotes health equity in our community.

**COMMUNITY SNAPSHOT**

More than one quarter of our residents are a racial/ethnic minority.

Race and Ethnicity Distribution*

- White, 71.9%
- Hispanic or Latino, 7.7%
- Other/Two or More, 6.1%
- Black/African American, 6.7%
- Asian/Pacific Islander, 7.1%
- American Indian/Alaskan Native, 0.4%

*Based on combined population data from Bureau of Census for Bloomington, Edina and Richfield, 2011-2013

**A CHALLENGE**

Protect minority residents from health threats that contribute to health inequity.

Low birth weight is a health threat that contributes to health inequity in our community. Low birth weight causes infant deaths and health and developmental complications. Mothers from a racial/ethnic minority are more likely to have low birth weight babies. Black/African American mothers are almost two times more likely to have a low birth weight baby than White mothers (Minnesota Department of Health, 2010-2014).

Peer breastfeeding support decreases differences between racial/ethnic groups.

Breastfeeding Initiation in WIC Program
Bloomington, Edina and Richfield 2013
OUTCOMES IN “PROTECT”

- 4 out of 301 women, who were screened for breast cancer at Sage Clinic because they did not have adequate health insurance, learned they had breast cancer. Sage staff helped them find resources for treatment.
- Bloomington has 3,500 residents trained in Anytime CPR, has located 126 automated electronic defibrillators in public facilities and has met criteria related to recognizing, caring for and protecting sudden cardiac arrest victims in order to receive Heart Safe Community designation in 2015.
- Trained nearly 20 area Somali residents for CERT (Community Emergency Response Team). CERT training provided them with basic skills to protect and respond to urgent needs of their community after a disaster.

Sage Clinic

“I want to thank everyone at Sage Clinic for their help and service. You made the process of enrolling in the program so very easy. Everyone at the clinic is unbelievably caring and comforting. I am proud to say that I have been cancer free for several years. I am so grateful to have a program like yours that is available to women who are uninsured.”

“I am very grateful for the services at Sage Women’s Clinic. Without insurance, it is a nightmare to be seen for these services. This program is a blessing.”

“Wonderful staff and great service. What a wonderful experience. Thank you so very much!”

Three Sage Clinic clients

Breastfeeding peer counselors and families in the program gather yearly during World Breastfeeding Week, August 1-7, to celebrate.
City officials heard about residents’ safety concerns and how some bicyclists were not following the rules of the road.
Community outreach focuses on safety and respect for bikers, walkers and motorists

Safety on Edina roads and walkways is a concern among the city’s leaders and residents. Added sidewalks and bike facilities offer more opportunities for healthy living, yet as more bikers, walkers and motorists mix, it became necessary to educate people on safety and the rules of the road.

**CHALLENGE**
Edina recently added pathways for bicyclists and pedestrians. A result was that safety issues became more obvious to residents. City officials heard about residents’ safety concerns and how some bicyclists were not following the rules of the road.

**SOLUTION**
Responding to concerns, staff from the city’s Engineering, Police, Communications and Administration offices teamed up to plan “Edina Street Smarts,” a street safety/education campaign. The effort received support from SHIP.

The planning team based “Edina Street Smarts” on Edina’s needs and research of similar successful campaigns around the country. “Edina Street Smarts” was in effect from spring through fall 2015 and may be repeated. It consisted of eight monthly educational messages throughout Edina. The campaign used the city’s website and social media, press releases, newspaper ads, YouTube videos and posters at city facilities and local businesses.

**RESULTS**
The campaign aimed to improve safety and raise awareness about the need for safe behaviors by drivers, pedestrians and bicyclists. Residents reported that they saw the messages and were satisfied with the results.

The Division of Public Health’s work with the City of Edina continued when it helped plan and execute Edina’s first Open Streets event on September 27, 2015. Open Streets events are increasing in popularity and are viewed as a way to promote health and wellness, active transportation, local business and community building. More than 9,000 people and 80 vendors participated in the Edina event. Participants rode bikes, walked, scootered, rollerbladed, danced and skipped down a one-mile stretch of West 50th Street from Browndale Avenue in Edina to Beard Avenue in Minneapolis.
COMMUNITY SNAPSHOT

Compared to MN, a greater percentage of local families with children are eligible for food help.

A CHALLENGE

Reduce the impact of low income and other conditions related to health inequities in order to improve physical and mental health.

Studies show us that low income and health problems such as obesity go hand in hand, but they don’t have to. This creates health inequity in our community and is something we must work to end.

A SOLUTION

Use practices with proven results

All of our services use evidence-based practices. For example, we provide the WIC (Women, Infants and Children) program to low-income families during pregnancy and early childhood. WIC provides nutritious foods and nutrition counseling at a critical stage for optimal growth and development. It has proven to decrease low birth weights and pre-term births. It helps women succeed at breastfeeding and gives children a healthy start in life.

Obesity is more prevalent in Black/African American and Hispanic/Latino residents.

- Richfield

Chart showing obesity rates by race and ethnicity.
OUTCOMES IN “IMPROVE”

- Completed a SHIP-funded School Breakfast Study with 60 elementary school students that demonstrated the importance of school breakfast to reduce absence and tardiness and improve classroom behavior.

- 24,800 Latino/Hispanic and Black/African American community members have access to a variety of culturally appropriate wellness opportunities through cultural health hubs that will improve health.

- 51 Healthy Families America participants demonstrated success at fostering healthy childhood development which will improve their future potential.

- 90 percent of pregnant women on our Women, Infants and Children program breastfeed their babies, which is greater than the State rate of 81 percent. Breastfeeding provides proven health benefits.

---

School Breakfast Study

“Some of our teachers said children were coming to school without breakfast and asking when their next meal would be. Undernourished children often have low energy, are irritable and have difficulty concentrating. We wanted to do something that could make a difference for these students.” Westwood Elementary Principal, Carolyn Hartwigsen

“I did have one student who would “save” food to take home to share with his mom and grandma. If he saw kids going to the trash can with an uneaten apple, he would politely ask if he could have it. This one child and how he benefited from having breakfast (in the classroom) daily made this whole project worthwhile.” Westwood Elementary Teacher

---

WIC Peer Breastfeeding Program participant.

Breastfeeding is an infant feeding best practice.
“I think we are starting to get the hang of it and my son is happier for it!”
“I feel I am a better mom to my son because of it.”

Thank you for providing this (Healthy Families America*) service. I feel I am a better mom to my son because of it. With each visit, my nurse leaves me with something new to think about, experiment with or just plain old tells me I am doing something right.

She knew when to pick up the phone for me when I needed extra help with postpartum depression and breastfeeding and helped me understand that I was not alone in my feelings as a new mom. She is excited to see my son each and every visit and makes us feel special! I love learning new ways to gently help my son learn a new skill and the weekly reminders to help me work on my goals with him.

She has been my cheerleader and one of my support people for when I feel sad, anxious and judged by others for my parenting decisions. I know my son better with each visit because of the information on his cues, wants and needs. We are currently working on reading his nap time cues and trying to find a routine of play, sleep and eat. As easy as that sounds, it is all new to me. I think we are starting to get the hang of it and my son is happier for it!"

Anonymous  Bloomington, Edina, Richfield Healthy Families America Participant

*Bloomington Public Health data from 2015 show significant success at promoting healthy childhood development for children enrolled in this evidence-based, accredited, home-visiting program.
Behind the Scenes

Accreditation

We recently joined the 151 of local public health agencies in the nation that are accredited. We are one of seven in Minnesota that is accredited.

Accreditation was a great way for us to benchmark our work against a set of national standards. Doing so also allowed us to improve our internal processes and deepen the role of quality improvement and performance management in our agency.

As we look back on the work it took to get to this point, we are excited about the revamped foundation for continued agency growth. We have learned more about our strengths and weaknesses, have a process for continuous improvement and stronger connections with all of our stakeholders.

We could not have gotten to this point without the hard work of our staff and our stakeholders! Our work does not end here; we will be doing annual reports to the Public Health Accreditation Board (PHAB) and going through reaccreditation every five years.
Strengthen efficient and effective day-to-day operations.

Ensure a competent workforce that has the capacity to accomplish the Division’s mission.

Improve systems to demonstrate and measure outcomes.

Increase the Division’s ability to effectively engage the community.

Ensure sustainable, adequate public health funding.

Strategic Plan And Performance Management

We identified and prioritized 20 strategies for achieving Strategic Plan goals.*

We developed 11 performance measures to track the Division’s progress in achieving the prioritized goals.

Of 11 performance measures, 7 are currently meeting our performance standards.

Three of the 11 measures are developing a baseline.

One measure is nearing our performance target. For this measure we tracked our progress in moving to an electronic record vs. a paper record for one of our quarterly assessments.

Our performance management system continues to develop and will be producing our first performance management report in October 2016.

### We fill the gaps in protection from infectious disease

Fewer people are coming to the Public Health Center for immunizations, yet many people still need this service. Public Health remains a “safety net” for those who have no other resources for immunizations. We provide a greater number of flu shots because we partner with schools, senior centers and other community organizations yearly to enable a greater level of community protection. All community members 6 months of age and older need yearly flu shots.
Who We Are

Our agency originated in 1948 to provide school nursing services. In 1960 we were established as a community-based public health division for the City of Bloomington. Beginning in 1977, our services have been contracted by the cities of Richfield and Edina. We have been providing health services and programs for people who live, work and play in Bloomington.

Mission

TO PROMOTE, PROTECT and IMPROVE
the health of our community
