

Edina YOUTH HEALTH UPDATE 2013 - 2014

ALCOHOL · MARIJUANA · PHYSICAL ACTIVITY & NUTRITION · TOBACCO · TEEN PREGNANCY PREVENTION

This **YOUTH HEALTH UPDATE** presents data from the Minnesota Student Survey for Edina students. Learn what you can do to support the health of Edina youth and what you can do to help youth avoid behaviors harmful to their health.

TOP 11 THINGS PARENTS AND OTHER ADULTS CAN DO

1. Role model the behavior you expect from your teen.
2. Be involved in your teen's life.
3. Show your interest by asking questions that need a response other than "yes" or "no" and then listen.
4. Get to know your teen's friends.
5. Set clear expectations and rules concerning alcohol use, other substance use and other unhealthy, risky behavior.
6. Follow through with consequences if rules and expectations are broken.
7. Be active and live a healthy lifestyle. Invite your children to walk, bike, or do other activities with you.
8. Be your teen's excuse not to break the rules. "My parents would be so angry if I . . ."
9. Eat together as a family at least 2-3 times a week.
10. Make it easy for teens to choose healthy foods at home and at school.
11. Let teens know when you think they've done well.

Youth Health Updates are a publication of Bloomington Public Health. Information in the publication includes data from the 2004, 2007, 2010 and 2013 Minnesota Student Surveys. Data from 1995, 1998 and 2001 is available upon request.

One question sometimes raised about student surveys is whether students' responses are honest and accurate. Researchers use a variety of data analysis techniques to examine the accuracy of anonymous surveys and these were applied to the student survey as well. Additionally, results are consistent over time with State and National trends.

The Minnesota Student Survey (MSS) is administered every three years. Previous surveys have been administered to 6th, 9th, and 12th graders across the state. In 2013, the survey was given to 5th, 8th, 9th and 11th graders. Student participation is voluntary. Ninth-grade data is used to monitor trends because these students historically have a high response rate and have been surveyed consistently across all years. Survey results provide information about youth assets and risk behaviors. Data can be used as a tool for initiating & continuing conversations about youth health.

ALCOHOL USE*

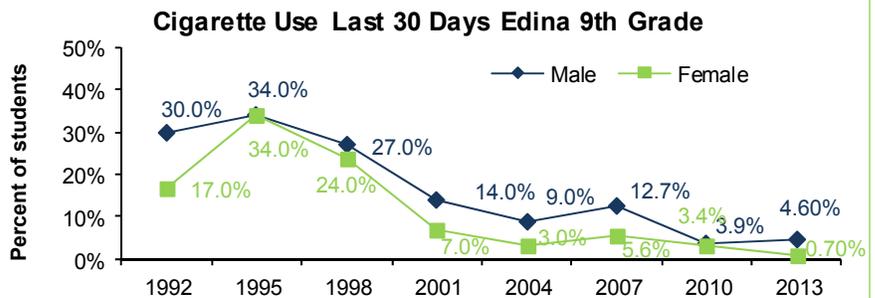

Alcohol use among Edina 9th graders has decreased overall since 1998, with 11.6% of males and 7.4% of females reporting past 30 day use in 2013.

**The question format changed slightly from 2004 to 2007. There is no data for 1992.*

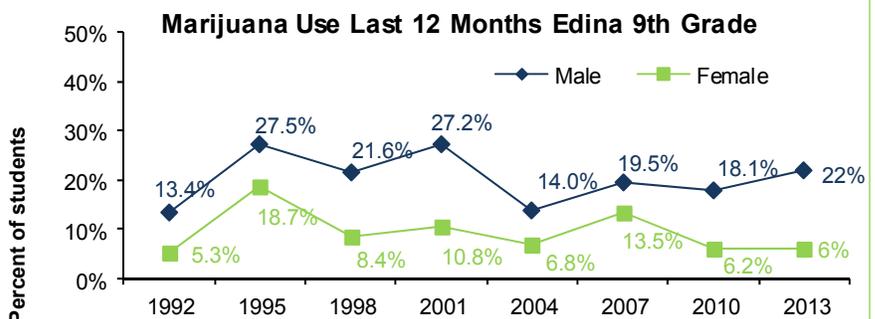

TOBACCO USE

Cigarette use is at its lowest point for 9th grade females at 0.7%, compared to 4.6% of 9th grade males reporting smoking in the past 30 days in 2013.

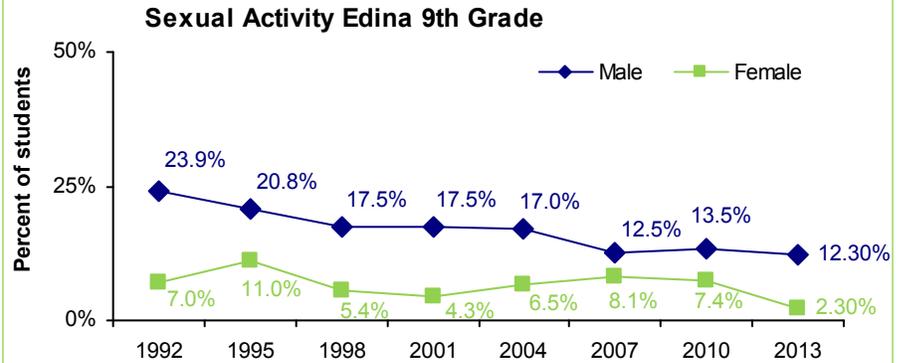

MARIJUANA USE

Marijuana use has remained steady overtime among 9th graders, with consistently lower rates among females compared to males.

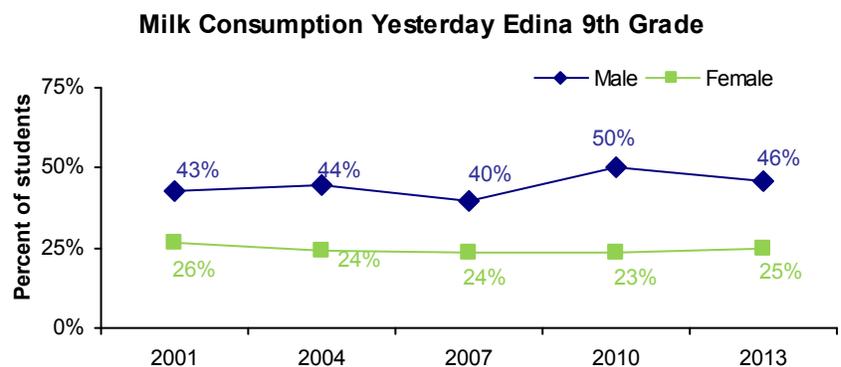

SEXUAL ACTIVITY

Among Edina 9th graders, males report having ever had sex about 10% more than females, Rates from males have declined about 10% since 1992 and fluctuated for females.

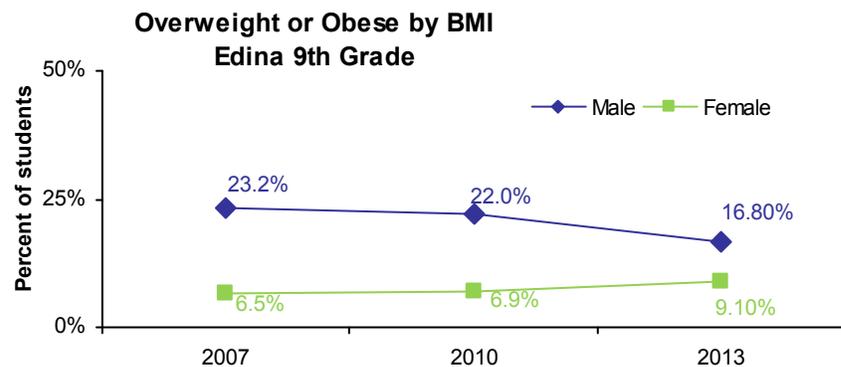

NUTRITION & WEIGHT STATUS

Consistently, a greater proportion of 9th grade males report consuming three or more drinks of milk yesterday than 9th grade females.

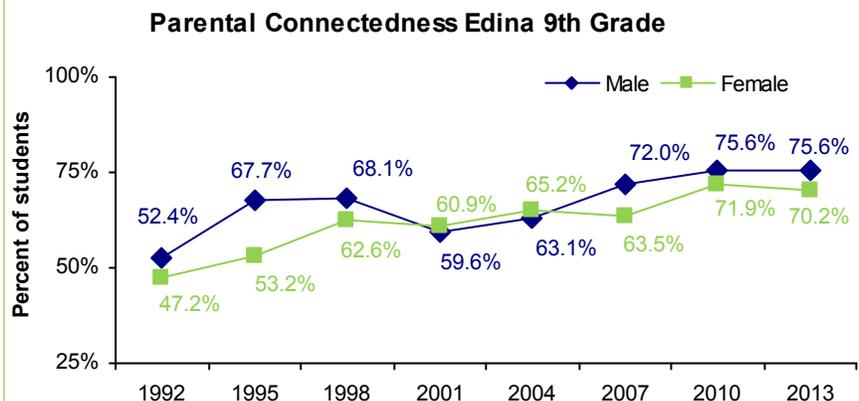

Among Edina 9th graders, the gap in the overweight and obesity rate between males and females has been narrowing, with a decline in male overweight and obesity and an increase in the rate among females between 2007 and 2013.

HEALTHY YOUTH DEVELOPMENT

The proportion of 9th graders who feel they can talk to both of their parents about problems has been increasing since 1992. In 2013, approximately 70 to 75% of 9th graders felt this way about their connectedness to their parents.
